

Requirements Engineering Table :

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall compute triage severity scores to dynamically order the waitlist.	High	Pass: Higher acuity patient moves ahead.	Prioritizes critical care.
FR-002	Functional	The system shall allocate available ER beds to patients.	High	Pass: Bed status updates to occupied.	Core dashboard function.
FR-003	Functional	The system shall orchestrate inter-facility ambulance transfer workflows.	Medium	Pass: Transfer request dispatched to ambulance.	Required for ICU overflow.
FR-004	Functional	The system shall display real-time ward occupancy.	High	Pass: Dashboard reflects accurate bed counts.	Provides visibility.

FR-005	Functional	The system shall allow administrators to update ward capacity.	Low	Pass: Total bed count updates in dashboard.	Administrative maintenance.
NFR-001	Non-Functional	Bed status transitions must propagate to clients via WebSockets in under 1 second.	High	Pass: Benchmarking tests confirm target latency.	WebSockets ensure real-time synchronization.
NFR-002	Non-Functional	The system shall restrict bed assignment actions to authorized Triage Nurses.	High	Pass: Unauthenticated access is denied.	Maintains security.
